***Claim Rejections - 35 USC § 103***

1. Claims 1-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meadows et al (6381496) in view of Sarwal et al (6662052).

Figure 1 of Meadows shows an implantable stimulator 100, a hand held programmer 202, a physician programmer 204 and an external stimulator 140. Col. 5, lines 56-63 teach that the system of Meadows can include a combination of external and internal stimulators. Col. 9, lines 15+ teach the various parameters that are transferred to the internal stimulator via the programmer. It is considered to be obvious that the test stimulator communicate bi-directionally with the programmer since it is the task of the external stimulator to test various parameters and settings to see if the system functions properly. Further, the patent to Sarwal teaches such bi-directional communication between a programmer and an external stimulator (see especially figure 13), which is typical in the art. Thus it would have been obvious to use bi-directional communication between the external stimulator and the programmer to test various parameters before final programming of the internal stimulator.

Since a new rejection has been made, this action is not made final.
